## Features

CFWLAseries for AM use is one of the most suitable intermediate filters, having such distinctive features as high selectivity, high stability, high attenuation, and adjustment-free operation. Additionally, its easy matching with IC helps create an easy circuit design. This is the most suitable for car stereo and all band radio with high attenuation.

- Metching of CERAFIL ${ }^{\text {© }}$ SFPLA/CFULA/CFWLA series with IFT is decided by the Qu of IFT and IFT secondary side impedence, |Z2|. Set the Qu at about 40 because a $Q u$ value which is too high (e.g.90) may produce ripple in the waveform. It is recommended to match the impedance of $|Z 2|$ with that of the CERAFILe.
