Features

SFELF10M7_G series for FM-receivers are monolithic type ceramic filters that use the thickness expander mode of the piezoelectric ceramic. As part of the environment protection program, the solder for terminal plating and terminal-element connection inside of the ceramic filter contain no lead (Pb).

Features

- 1. Little dispersion of amplitude characteristics and phase characteristics (G. D. T. characteristics)
- 2. The SFELF G series is based on SFELF FA00/GA00/HA00, and it obtains high selectivity with low loss. There is little dispersion of amplitude and GDT characteristics, and low distortion rate can be obtained.
- 3. The flatness of GDT is inspected for all products.
